

2024 Consumer Confidence Report for Public Water System RICE WSC

This is your water quality report for January 1 to December 31, 2024

RICE WSC provides surface water from Navarro Milles Lake in Navarro County and Lake Halbert in Navarro County, and Lake Bardwell Lake in Ellis County.

For more information regarding this report contact:

Name Ada Garza

Phone 903-326-5551

Este reporte incluye información importante sobre el agua para tomar. Para asistencia en español, favor de llamar al teléfono (903) 326-5551

Definitions and Abbreviations

Definitions and Abbreviations

The following tables contain scientific terms and measures, some of which may require explanation.

Action Level:

The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Avg:

Regulatory compliance with some MCLs are based on running annual average of monthly samples.

Level 1 Assessment:

A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

Level 2 Assessment:

A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

Maximum Contaminant Level or MCL:

The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal or MCLG:

The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum residual disinfectant level or MRDL:

The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum residual disinfectant level goal or MRDL G:

The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

MFL

million fibers per liter (a measure of asbestos)

mrem:

millirems per year (a measure of radiation absorbed by the body)

na:

not applicable.

NTU

nephelometric turbidity units (a measure of turbidity)

pCi/L

picocuries per liter (a measure of radioactivity)

Definitions and Abbreviations

| | |
|----------------------------|---|
| ppb: | micrograms per liter or parts per billion |
| ppm: | milligrams per liter or parts per million |
| ppq | parts per quadrillion, or picograms per liter (pg/L) |
| ppt | parts per trillion, or nanograms per liter (ng/L) |
| Treatment Technique or TT: | A required process intended to reduce the level of a contaminant in drinking water. |

Information about your Drinking Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPAs Safe Drinking Water Hotline at (800) 426-4791.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Contaminants may be found in drinking water that may cause taste, color, or odor problems. These types of problems are not necessarily causes for health concerns. For more information on taste, odor, or color of drinking water, please contact the system's business office.

You may be more vulnerable than the general population to certain microbial contaminants, such as Cryptosporidium, in drinking water.

Infants, some elderly, or immunocompromised persons such as those undergoing chemotherapy for cancer; persons who have undergone

organ transplants; those who are undergoing treatment with steroids; and people with HIV/AIDS or other immune system disorders, can be particularly at risk from infections. You should seek advice about drinking water from your physician or health care providers. Additional guidelines on appropriate means to lessen the risk of infection by Cryptosporidium are available from the Safe Drinking Water Hotline (800-426-4791).

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. We are responsible for providing high quality drinking water, but we cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

Water Loss reported to the Texas Water Development Board was approximately 6.6% 21,680,940 gallons of water.

We completed the Initial service line inventory of the system as required by the Lead and Copper Rule Revision and no lead was found.

Information about Source Water

RICE WSC purchases water from CITY OF ENNIS. CITY OF ENNIS provides purchase surface water from Bardwell Lake located in Ellis County. Attached is the **table containing any contaminant that was detected in the provider's water for this calendar year, unless that contaminant has been separately monitored in your water system (i.e. TTHM, HAA5, Lead and Copper, Coliforms)**.

RICE WSC purchases water from CITY OF CORSICANA. CITY OF CORSICANA provides purchase surface water from Lake Halbert and Navarro Milles Lake located in Navarro County . Attached is the **table containing any contaminant that was detected in the provider's water for this calendar year, unless that contaminant has been separately monitored in your water system (i.e. TTHM, HAA5, Lead and Copper, Coliforms)**.

TCEQ completed a Source Water Susceptibility for all drinking water systems that own their sources. This report describes the susceptibility and types of constituents that may come into contact with the drinking water source based on human activities and natural conditions. The system(s) from which we purchase our water received the assessment report. For more information on source water assessment s and protection efforts at our system contact **Ada Garza 903-326-5551**.

| Lead and Copper | Date Sampled | MCLG | Action Level (AL) | 90th Percentile | # Sites Over AL | Units | Violation | Likely Source of Contamination |
|-----------------|--------------|------|-------------------|-----------------|-----------------|-------|-----------|---|
| Copper | 2024 | 1.3 | 1.3 | 0.717 | 0 | ppm | N | Erosion of natural deposits; Leaching from wood preservatives; Corrosion of household plumbing systems. |

2024 Water Quality Test Results

| Disinfection By-Products | Collection Date | Highest Level Detected | Range of Individual Samples | MCLG | MCL | Units | Violation | Likely Source of Contamination | |
|--------------------------|-----------------|------------------------|-----------------------------|-----------------------|-----|-------|-----------|--------------------------------|--|
| Haloacetic Acids (HAA5) | 2024 | 36 | 1.1 - 56.8 | No goal for the total | 60 | 60 | ppb | N | By-product of drinking water disinfection. |

*The value in the Highest Level or Average Detected column is the highest average of all HAA5 sample results collected at a location over a year

| | | | | | | | | | |
|-------------------------------|------|----|-------------|-----------------------|----|----|-----|---|--|
| Total Trihalomethanes (TT HM) | 2024 | 62 | 39.9 - 89.9 | No goal for the total | 80 | 80 | ppb | N | By-product of drinking water disinfection. |
|-------------------------------|------|----|-------------|-----------------------|----|----|-----|---|--|

*The value in the Highest Level or Average Detected column is the highest average of all TTHM sample results collected at a location over a year

| Inorganic Contaminants | Collection Date | Highest Level Detected | Range of Individual Samples | MCLG | MCL | Units | Violation | Likely Source of Contamination |
|--------------------------------|-----------------|------------------------|-----------------------------|------|-----|-------|-----------|--|
| Nitrate [measured as Nitrogen] | 2024 | 2 | 2.31 - 2.32 | 10 | 10 | ppm | N | Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits. |

Disinfectant Residual

A blank disinfectant residual table has been added to the CCR template, you will need to add data to the fields. Your data can be taken off the Disinfectant Level Quarterly Operating Reports (DLQOR).

| Disinfectant Residual | Year | Average Level | Range of Levels Detected | MRDL | MRDLG | Unit of Measure | Violation (Y/N) | Source in Drinking Water |
|-----------------------|------|---------------|--------------------------|------|-------|-----------------|-----------------|--|
| DLQR | 2024 | 2.21 | .64 – 3.2 | 4 | 4 | ppm | YES | Water additive used to control microbes. |

Violations

| Chlorine | | | | |
|--|------------------------------|-----------------------------|---|--|
| Some people who use water containing chlorine well in excess of the MRDL could experience irritating effects to their eyes and nose. Some people who drink water containing chlorine well in excess of the MRDL could experience stomach discomfort. | | | | |
| Violation Type DLQR | Violation Begin 9/18/2024 | Violation End 09/29/2025 | Violation Explanation we failed to file this form on time, but we did sample the water daily. Public notice received 9/30/2024 | |

Violations

| | | | |
|--|------------|------------|---|
| Disinfectant Level Quarterly Operating Report (DLQOR). | 04/01/2024 | 06/30/2024 | We failed to test our drinking water for the contaminant and period indicated. Because of this failure, we cannot be sure of the quality of our drinking water during the period indicated. |
|--|------------|------------|---|

**Average Chlorine Residual
2024**

| Month | Average Residual (mg/L) |
|---------------------|-------------------------|
| January | 2.64 |
| February | 2.46 |
| March | 2.48 |
| April | 2.43 |
| May | 2.26 |
| June | 2.04 |
| July | 1.99 |
| August | 2.10 |
| September | 2.25 |
| October | 2.27 |
| November | 2.20 |
| December | 2.27 |
| 2024 Yearly Average | 2.28 mg/L |

Min reading 0.6 mg/L
Max Reading 3.8 mg/L

TTHM's 2024

| Date of Samples | 1/31/2024 | 4/8/2024 | 8/12/2024 | | |
|---------------------------------|-------------|-------------|-------------|-------------|---------------------|
| Address of Sample | 1st Quarter | 2nd Quarter | 3rd Quarter | 4th Quarter | Average of Quarters |
| 4501 E HWY 31 | 39.1 | 40.7 | 60.8 | 38.9 | 44.9 |
| 2117 W 15th Ave | 40.9 | 48.5 | 80.8 | 51.7 | 55.5 |
| 3500 Northpark | 41.6 | 46.3 | 79.4 | 41.3 | 52.2 |
| 700 E 16th Ave | 40.0 | 46.6 | 72.5 | 47.4 | 51.6 |
| Average for each quarter | 40.4 | 45.5 | 73.4 | 44.8 | 51.0 |

Haa5's 2024

| Date of Samples | 1/31/2024 | 4/8/2024 | 8/12/2024 | | |
|---------------------------------|-------------|-------------|-------------|-------------|---------------------|
| Address of Sample | 1st Quarter | 2nd Quarter | 3rd Quarter | 4th Quarter | Average of Quarters |
| 4501 E HWY 31 | 17.2 | 18.0 | 28.5 | 20.9 | 21.2 |
| 2117 W 15th Ave | 15.5 | 23.3 | 36.1 | 16.4 | 22.8 |
| 3500 Northpark | 16.9 | 22.3 | 43.3 | 24.5 | 26.8 |
| 700 E 16th Ave | 14.0 | 21.5 | 44.0 | 6.90 | 21.6 |
| Average for each quarter | 15.9 | 21.3 | 38.0 | 17.18 | 23.1 |

Regulated Substances

These substances are regulated or are required to be monitored and were detected in Ennis tap water. None of the detected substances exceeded the regulated limits.

| Year | Substance | Units | Average | Minimum | Maximum | MCL | MCLG | Possible Source |
|------|-----------------------------------|-------|---------|---------|---------|--------|-----------------------|---|
| 2024 | Barium | ppm | 0.061 | 0.061 | 0.061 | 2.0 | 2.0 | Erosion of natural deposits, discharge from drilling and metal refineries |
| 2024 | Atrazine | ppm | 0.0001 | 0.0001 | 0.0001 | 3.0 | 3.0 | Runoff from herbicide used on row crops |
| 2024 | Cyanide | ppm | 0.0227 | 0.0027 | 0.0027 | 0.2 | 0.2 | Discharge from steel/metal factories; plastic factories and runoff from fertilizer |
| 2024 | Arsenic | ppm | 0.001 | 0.001 | 0.001 | 0.010 | 0 | Natural deposits in the earth or from industrial and agricultural pollution |
| 2024 | Fluoride | ppm | 0.254 | 0.254 | 0.254 | 4 | 4 | Erosion of natural deposits, water additive which promotes strong teeth, discharge from fertilizer and aluminum factories |
| 2024 | Nitrate (measured as Nitrogen) *1 | ppm | 0.103 | 0.103 | 0.103 | 10 | 10 | Runoff from fertilizer, septic tanks, sewage, natural deposits |
| 2024 | Chloramines *3 | ppm | 3.17 | 2.90 | 3.51 | MRDL=4 | MRDLG=4 | Disinfectant used to control microbes |
| 2024 | Total Haloacetic Acids (HAA5) *4 | ppb | 21.69 | 14.0 | 27.0 | 60 | No goal for the total | Byproduct of drinking water disinfection |
| 2024 | Total Trihalomethanes (TTHM) *4 | ppb | 42.47 | 32.80 | 51.0 | 80 | No goal for the total | Byproduct of drinking water disinfection |

Total Organic Carbon (TOC) *5

| | | | | | | | | |
|------|----------------|-----|------|------|------|-----------|--|--------------------------------------|
| 2024 | Source Water | ppm | 4.79 | 4.43 | 5.44 | | | Naturally present in the environment |
| 2024 | Drinking Water | ppm | 3.02 | 2.51 | 3.41 | | | Naturally present in the environment |
| 2024 | Removal Ratio | % | 1.28 | 1.00 | 1.85 | %Removal* | | NA |

Turbidity *6

| Year | Substance | Units | Highest Single Measurement | Minimum | Lowest Monthly % of Samples Meeting Limit | MCL | Turbidity Limits | Possible Source |
|------|-----------|-------|----------------------------|---------|---|-----|------------------|-----------------|
| 2024 | Turbidity | NTU | 0.08 | 0.04 | 100 | 0.3 | 0.3 | Soil runoff |

Lead and Copper *7

| Year | Substance | Units | Concentration Level | Number of Sites AL | MCL | 90 th Percentile | Violation | Possible Source |
|------|--------------|-------|---------------------|--------------------|-----|-----------------------------|-----------|--|
| 2024 | Texas Copper | ppm | 0.0026 | 0 | 1.0 | NA | N | Corrosion of household plumbing systems, corrosion of natural deposits, leaching from wood preservatives |

Coliform Bacteria *8

| Year | Total Bacteriological Samples Collected | Maximum Contaminant Level Goal | Total Coliform | Highest No. of Positive | Fecal Coliform or E.coli Maximum Contaminant Level | No. of positive E.coli or Fecal Coliform Samples | Violation | Possible Source |
|------|---|--------------------------------|----------------|-------------------------|--|--|-----------|--------------------------------------|
| 2024 | 240 | 0 | 0 | 0 | *8 | 0 | N | Naturally present in the environment |

Notes: *1 Nitrate Advisory - Nitrate in drinking water at levels above 10 ppm is a health risk for infants of less than six months of age. High nitrate levels in drinking water can cause blue baby syndrome. Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. If you are caring for an infant, you should ask advice from your health care provider. *2 EPA considers 50 pCi/L to be the level of concern for beta particles. *3 Systems must complete and submit disinfection data on the Surface Water Monthly Operations Report (SWMOR). On the CCR report, the system must provide disinfection type, minimum, maximum, and average level. *4 All sample results have been used for calculating the Highest Level Detected. *5 Total Organic Carbon (TOC) no health effects. The disinfectant can combine with TOC to form disinfection byproducts. Disinfection is necessary to ensure that water does not have unacceptable levels of pathogens. Byproducts of disinfection include Trihalomethanes (THMs) and haloacetic acids (HAA) which are reported elsewhere in this report. Removal ratio is the percent of TOC removed by the treatment process divided by the percent of TOC required by TCEQ to be removed. *6 Turbidity has no health effects. However, turbidity can interfere with disinfection and provide a media for microbial growth. Turbidity may indicate the presence of disease-causing organisms. These organisms include bacteria, viruses, and parasites that can cause symptoms such as nausea, cramps, diarrhea, and associated headaches. *7 Definitions: Action Level Goal (ALG): The level of a contaminant in drinking water below which there is no known or expected risk to health. ALGs allow for a margin of safety. Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow. If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. This water supply is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (800) 426-4791 or at <http://www.epa.gov/safewater/lead>. *8 Coliform Bacteria, Fecal Coliform or E.coli maximum containment level (MCL); A routine sample and a repeat sample are total coliform positive and one is also fecal coliform or E.coli positive. A violation occurs if both a routine sample and a repeat sample are total coliform positive. A violation occurs if fecal coliform or E.coli are ever positive.

Unregulated and Secondary Drinking Water Standards

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulation is warranted. Any unregulated contaminants detected are reported in the following table. For additional information and data visit <https://www.epa.gov/dwucmr/fifth-unregulated-contaminant-monitoring-rule>, or call the Safe Drinking Water Hotline at (800) 426-4791.

| Year | Substance | Units | Average | Minimum | Maximum | MCL | MCLG | Possible Source |
|------|---------------------------------------|----------|---------|---------|---------|---------------|---------------|--|
| 2024 | Chloroform | ppb | 17.24 | 10.9 | 24.70 | Not Regulated | Not Regulated | By-product of drinking water disinfection. Not regulated individually, included in Total Trihalomethanes |
| 2024 | Bromoform | ppb | 1.03 | 0 | 1.54 | 100.00 | 100.00 | |
| 2024 | Bromodichloromethane | ppb | 15.88 | 13.60 | 18.40 | Not Regulated | Not Regulated | |
| 2024 | Dibromochloromethane | ppb | 8.33 | 7.32 | 9.51 | Not Regulated | Not Regulated | |
| 2024 | Dibromoacetic Acid | ppb | 3.49 | 1.70 | 8.10 | Not Regulated | Not Regulated | |
| 2024 | Bromoacetic Acid | ppb | 6.79 | 5.10 | 9.80 | Not Regulated | Not Regulated | |
| 2024 | Trichloroacetic Acid | ppb | 4.89 | 2.50 | 7.30 | Not Regulated | Not Regulated | |
| 2024 | Monochloroacetic Acid | ppb | 2.09 | 1.10 | 3.80 | Not Regulated | Not Regulated | |
| 2024 | Manganese | ppm | 0.0015 | 0.0015 | 0.0015 | 0.05 | NA | Abundant naturally occurring element |
| 2024 | Aluminum | ppm | 0.022 | 0.022 | 0.022 | 0.050 – 0.200 | 0.050 | Abundant naturally occurring element |
| 2024 | Nickel | ppm | 0.001 | 0.001 | 0.001 | 0.1000 | Not Regulated | Corrosion of household plumbing systems; erosion of natural deposits |
| 2024 | Calcium | ppm | 42.6 | 42.6 | 42.6 | NA | NA | Abundant naturally occurring element |
| 2024 | Conductivity@25 C UMHOS/CM | UMHO /CM | 357.000 | 357.000 | 357.000 | NA | Not Regulated | Conductivity of water is its ability to conduct electric current. Salts or other chemicals that dissolve break down into positive and negative ions |
| 2024 | Chloride | ppm | 24.3 | 24.3 | 24.3 | 250.0 | Not Regulated | Chlorides may get into surface water from several sources including: rocks containing chlorides, agricultural run-off, wastewater from industries, oil well wastes, and effluent wastewater from wastewater treatment plants |
| 2024 | Hardness as CaCO ₃ | ppm | 116 | 116 | 116 | NA | NA | Naturally occurring calcium and magnesium |
| 2024 | pH | pH | 7.91 | 7.77 | 8.06 | 6.50-8.50 | 6.50-8.50 | Measure of corrosiveness of water |
| 2024 | Sodium | ppm | 20.6 | 20.6 | 20.6 | NA | NA | Erosion of natural deposits, by-product of oil field activity |
| 2024 | Magnesium | ppm | 2.29 | 2.29 | 2.29 | NA | NA | Abundant naturally occurring element |
| 2024 | Potassium | ppm | 6.54 | 6.54 | 6.54 | Not Regulated | Not Regulated | Abundant naturally occurring element |
| 2024 | Sulfate | ppm | 27.00 | 27.00 | 27.00 | 250.0 | 250.0 | Naturally occurring; common industrial by-product; by-product of oil field activity |
| 2024 | Total Alkalinity as CaCO ₃ | ppm | 101 | 101 | 101 | NA | NA | Naturally occurring soluble mineral salts |
| 2024 | Total Dissolved Solids | ppm | 193 | 193 | 193 | 500 | 500 | Total dissolved mineral constituents in water |
